

# Prerequisites

Java 11+ (This guide makes use of Java 17+)

Free storage (a lot)

---

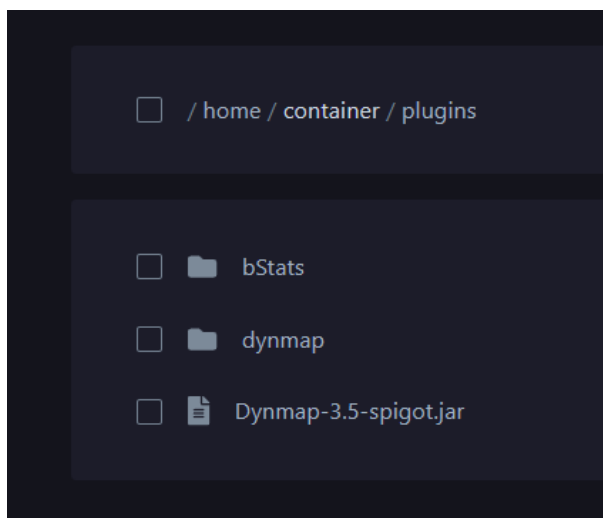

# Installation

Download [dynmap](#)

Upload it in the `plugins` folder, from the File Manager.

(Re)start the server to load the plugin. You'll know it loaded successfully if it generated a folder named "dynmap"

---

## Web Server

In the `Configuration.txt`, located at `plugins/dynmap/Configuration.txt` :

Find (use CTRL + F shortcut) `webserver-port` field within the file.

Change the port's value to your additional port allocation's value.

Restart the server to apply the changes

---
