Plan - Velocity

What is Plan?

Plan is a plugin that provides detailed analytics for Minecraft servers, tracking player activity, server performance, and engagement. It features a web-based dashboard, multi-server support, and integrations with popular plugins. Ideal for monitoring server health, understanding player behavior, and improving retention, it helps server admins make data-driven decisions.

Requirements
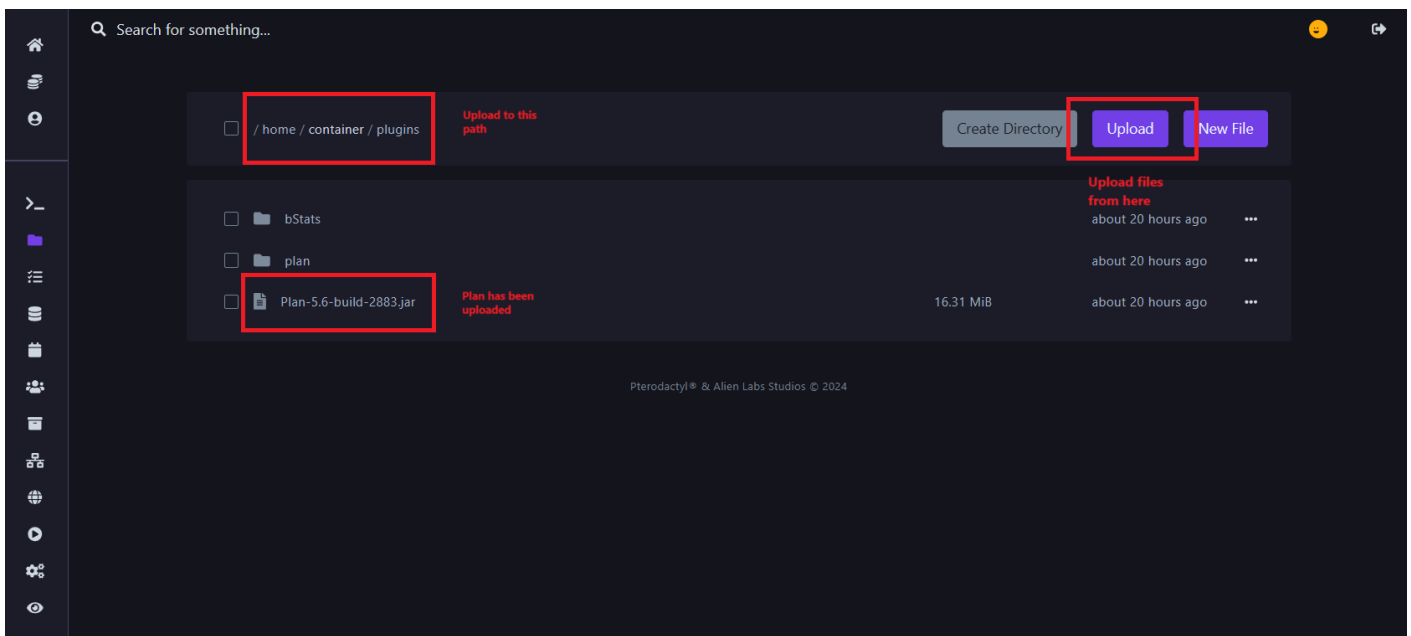

Additional port (or network allocation)

Java 11

MySQL database

Installation On Proxy

Download Plan

Place Plan.jar to the plugin directory through the file manager

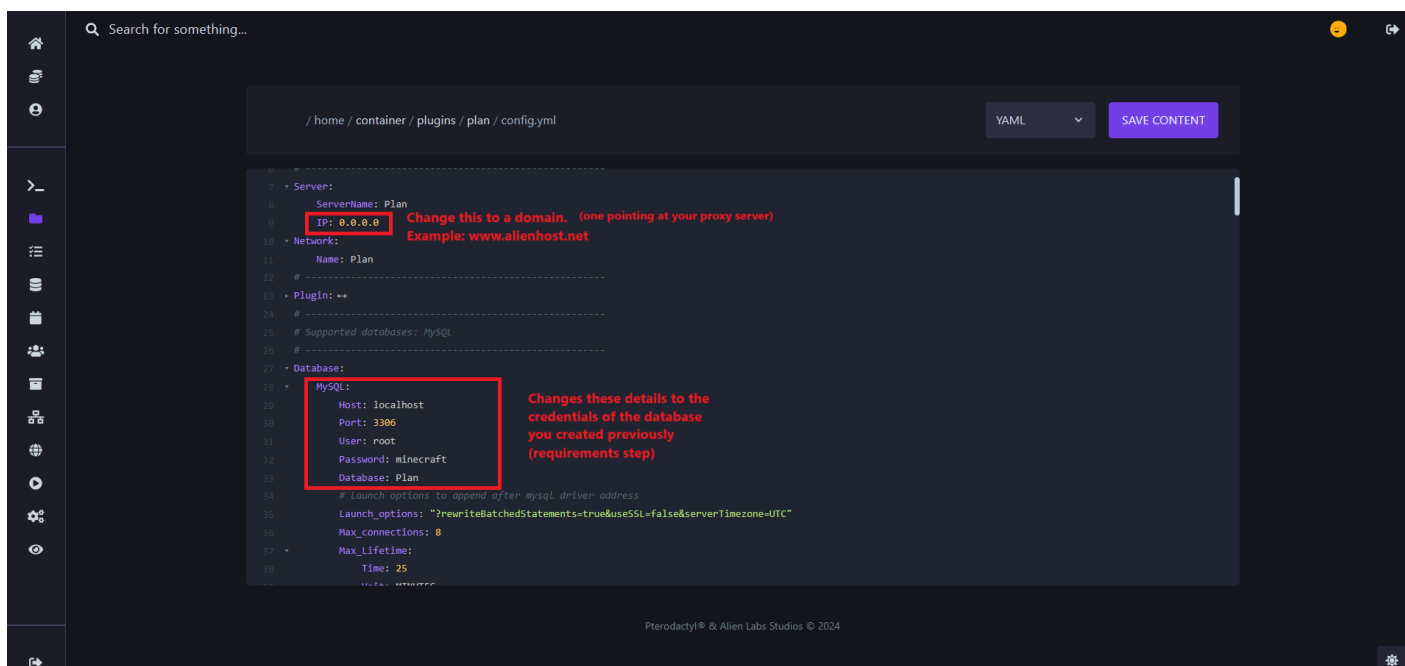

Default Webserver Port in the config is 8804, change it to the one allocated.

Change the IP Address through Webserver.Alternative_IP field (don't remove %port% as it automatically hooks to the chosen port).

Set Server.IP to a domain which is actively pointing at your minecraft server

Edit Database.MYSQL fileds appropriately

Installation On Backends

Place Plan.jar to the plugin directory through the file manager

Edit Database.MYSQL fileds and Database.Type appropriately. **Note:** They **must** be the same as the proxy's

Disable the webserver on the backends by setting `false` the `Disable_Webserver`

Reload Plan through te command /plan reload

Access The Web Interface

Now go on your web browser and input `http://{yourdomain.com}:{port}`

replace {yourdomain.com}:port with your server's actual domain/ip address and port
