

# How to install Fabric modpack

## Make your server Fabric

Before installing your modpack there are a few things we need to do before hand to set it up.

**Step 1:** Make sure to head over to your <https://alienhost.net/dashboard.php> and head to your server that you want to change to **Fabric**. After clicking on your server you have selected, proceed down to the tab section at the bottom right hand side and change your server to **Fabric Minecraft**. Then click **Change Egg**.

Melon Tutorials Server

Change Egg

Step 2

ALIENHOST.NET SAYS

Are you sure you want to do that. This might re-install your server?

OK

Cancel

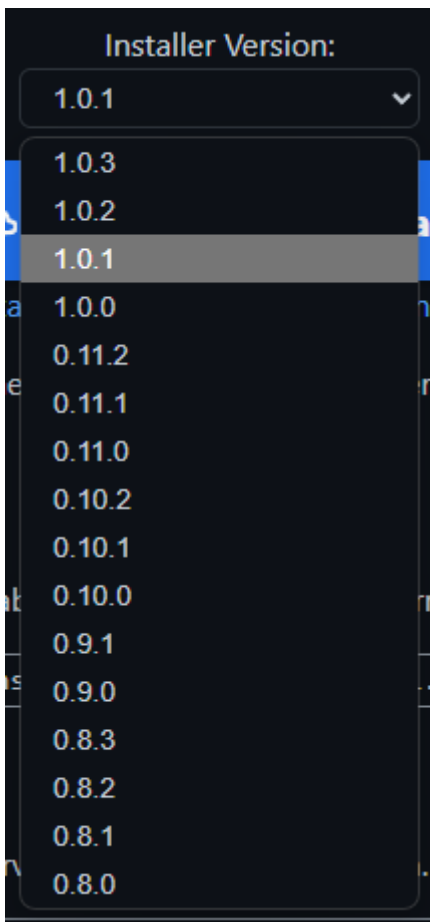

And now you have a Fabric compatible server. (May need to reinstall from the "Settings" area.

**Step 2:** After Completing Step 1, we now head over to our panel to config our server to run forge. To check that your server is **Fabric**, head over to the **Startup** Icon on the left hand side and see if it looks like this. Check photo Below

**Note:** The Fabric Loader Version is the installer's version. As shown below

# Downloading the Modpack

**Step 3:** Download the modpack you want, from the [CurseForge website](#). I'll be downloading [Cobblemon](#).

**Step 4:** Download the **server pack** of the modpack. There are 2 ways.

**1st method:** Scroll down, and on the right you'll find these (check image below)

**2nd method:** This one **will always work**. When you've opened the modpack's webpage, click on "Files", then "Additional files" and to download the modpack, click the 3 dots.

# Uploading the files

Follow [this guide](#). Make sure you have [WinSCP](#) installed.

Before uploading your files, unarchive/unzip your modpack.

Name	Size	Type	Changed		Name	Size	Changed	Rights	Owner

					whitelist.json	1 KB	2/22/2025 3:40:42 PM	rw-r--r--	0

Select all the files on the left of the screen and drag to the right side. (Don't drag on a folder)

With this modpack we can just double click on the mods folder on both sides. And upload the files, as the other ones in the modpack aren't essential.

Now you can close WinSCP

# Restart your server

Go back to the panel. Restart the server.

# Troubleshooting

**Upload doesn't work?** Make sure your internet is stable and your server has enough space.

**Server crashing?** Make sure the modpack's version matches the server version. Also make sure you're using the correct Java version for the server.
