

Push notifications using NTFY

1. Download the **NTFY App** from **Google Play** or **IOS App Store**.
2. Open the app and navigate to settings
3. Set default server to "**https://ntfy.alienhost.net**"
4. **Android** users, scroll down and change connection protocol to "Websockets"
5. Navigate back to dashboard and click the **+** button to add a new topic
6. Name of topic corresponds to code-name of your host system
Available Topics: **EuropeShared** , **EuropeDedicated** , **Managed** ,
NorthAmericaShared , **NorthAmericaDedicated** , **AsiaShared**, **AustraliaShared**
7. Enable "use another server"
8. As URL input "**https://ntfy.alienhost.net**"
9. Click Subscribe

Note:

- for IOS sometimes Push-Notifications do not work, you would have to manually check whether there are news or not.
- for Android if you are using Samsung or maybe similar, something Power-saving mode per App may restrict push notifications, set it to unrestricted to fix.
